

IT For Your Small Business Co.

IT For Your Small Business provides a managed appliance to secure your business's data and network while providing your business with more options for accessing your data. We can do it all from desktop to network to server. We understand the big picture and how to put all the pieces together to save you money and deliver excellent service. We have experience supporting:

- Desktop PCs
- Unix Servers (AIX, HP-UX, Linux, Sun)
- Windows
- Networks – cabled and wireless
- TCP/IP networking
- VPN and Firewalls (Linux, Cisco, Checkpoint FW-1)

Our managed service includes the daily system administration tasks to ensure the system remains up and stable. We'll review the system logs to look for problems, and watch the backup reports on a daily basis. Backups often need adjusting to ensure that the data being backed up fits on the backup media. We'll provide some additional tools and services as part of the service, such as our custom content management system.

Other services are available: wireless and cabled network installation, PC installation and software support, consulting, custom software, web design, firewall support, and consulting.

Many large corporate IT organizations provide these services to internal users:

- Email
- Virus / Spam filtering for email
- Virus / Spam filtering for web browsing
- Domain Name Services
- Firewall Services
- Wireless Networking (optional)
- Windows File / Print Services
- ID Management Services
- Time Synchronization
- Database Services
- VPN / Remote Access
- Web Servers
- IP Address Management
- Backups of OS / Data
- Scripting Languages for reports
- Web based email for remote access
- Web proxy for faster web browsing
- Web content management software
- Uninterruptible Power Supplies for server stability
- Employee and/or customer user Directory (LDAP)
- Network / Web traffic performance reports
- Single Sign On – one username password for all services.

We can deliver all of these services to your small business for a tiny fraction of the cost of what a typical Fortune 500 company would spend.

For more information about these services or what they are, visit our web site at:

Small Businesses Need Help

Many small businesses do things because it's the cheapest, easiest, or quickest choice the owner/employees know. Files are often stored locally on multiple PCs, windows file sharing often gives any user on your network complete data access. Data is often not backed up properly. A single PC experiencing a problem can cripple the entire business.

How IT For Your Small Business Co. can help:

We provide a server for your network that works like an appliance. We turn it on, and you use it. We will manage the system, and ensure everything is working correctly so you don't have to. Firewall, Virus scanning, and ID Management provide security to your network – keeping hackers and unwanted people out while giving you access to the internet safely. Windows File/Print services provides a secure, easily accessible way to organize your files and data, providing simultaneous access to information and simplifying backups. This ensures that the loss of a desktop PC won't cripple your business. If a desktop fails, just log on any other PC to access your data. Our server will run unattended backups, freeing you from having to manually figure out what got backed up.

Save Money and Grow!

Using these services helps you organize your data and set up your network in a way that promotes business growth and good practices. Our tools make it easy to add a new user to your network.

We can help you save money too.

Open Source Software (OSS) is free for use. Commercial software charges per copy or per concurrent user. These charges are avoided completely with OSS. OSS can also be more stable or reliable than similar commercial products. Updated software is often released frequently. We'll even keep your system up to current patch levels.

Don't have a good network or internet connectivity? We can help you set all of this up, and even keep track of all of your software licenses and systems. Need a system upgrade? We can help with that too. **We can help you plan your network from the ground up to support growing the business in a cost effective way.**

If you need these services for your business (who doesn't?), then call us at (618) 451-7320 or email support@itfysb.com and we will schedule an on-site demonstration. We'll bring a server out to your site and show you how all these pieces can fit together with your business.
